

CLAIMS:

1. An auxiliary part for mounting attachments such as a skin stretcher, a lubricator, and the like on or around an outer cutting member of an electric shaver in a detachable manner, characterized in that the auxiliary part is formed by an element which can be clicked onto the corresponding outer cutting member by its one side and is provided at its other side with fastening means, for example snap connection means, for one or several attachments.

2. An auxiliary part as claimed in claim 1 and suitable for an electric shaver whose outer cutting member is formed by a shaving foil, characterized in that the auxiliary part has a rectangular shape with one or two rectangular recesses, each of which narrowly fits the outer circumference of the cutting member(s), and said auxiliary part is provided at its upper side along the long sides of the respective recesses with means for fastening at least one skin stretcher member and/or at least one lubricant carrier.

3. An auxiliary part as claimed in claim 1, suitable for an electric shaver provided with rotary cutting members, characterized in that the annular element is provided at its inner circumference with a cylindrical surface which narrowly fits around the outer circumference of the cutting member, and is also provided with a cylindrical surface at its outer circumference, over which surface an annular skin stretcher member or lubricant member is provided with narrow fit.

4. An auxiliary part as claimed in claim 3, characterized in that a surface with a raised, slightly conical edge is provided within the ring so as to be connected to the ring, on which edge a lubricant carrier can be provided.

5. An auxiliary part as claimed in claim 4, characterized in that the central surface is provided at its other side with a projection which fits an accommodation space of the cutting member.

SUBAI

6. An auxiliary part as claimed in claim 2 or 5, characterized in that a wear indicator is provided on a central surface, which indicator becomes visible when the lubricant carrier has become substantially exhausted and is due for replacement.

5 7. An auxiliary part as claimed in any one or several of the preceding claims, suitable in particular for an electric shaver provided with one or several rotary cutting members, characterized in that the auxiliary part is formed by a base part provided at one side with a projection which can be fastened in a central cavity of an outer cutting member by means of a snap connection, while a wear indicator covered by a lubricant layer is provided
10 on the other side of the base part.

8. An electric shaver with at least one shaving head comprising an outer cutting member, the or each outer cutting member being provided with hair inlet openings, characterized in that each shaving head is provided with an auxiliary part as claimed in one or
15 several of the preceding claims which can be snapped home on or around said shaving head and can be removed therefrom.
